

Introducing the Sequence® bottom drain and surface skimmer: Intercept debris before it damages your pump!

Sequence® now offers a surface skimmer that comes equipped with ports to tie into a bottom drain and external pump.

Compared to a traditional pond skimmer:

- Unique design provides two separate internal chambers
 - Debris chamber - ties bottom drain & surface skimming together while isolating debris
 - Clean Chamber - ties in the external pump with clean water for longevity

Compared to a traditional swimming pool strainer basket:

- Reduces routine maintenance in a pond system
- Increase overall flow
- Less clogging
- Lowers the exposure to system airlock
